

Shivang Chauhan

SDE III

Bangalore, India +91 91767 88879 chauhanshivang4@gmail.com

Full-stack engineer with 12+ years building high-scale web architectures, conversational-AI platforms, and self-serve ad tech. Works AI-first — pairing agentic tooling (Claude Code, Copilot) with sound architecture to ship production systems solo at team speed. Deep in React, React Native, Node.js, and FastAPI, with measurable cost and performance wins at enterprise scale.

PROFESSIONAL EXPERIENCE

[24]7.ai — Bangalore

Sep 2020 – Present

SDE III

- Agentic Runtime (conversational AI): architected an async Python FastAPI backend with a Node.js integration layer — intent resolution, session management, Redis-backed state — plus a configurable React/TypeScript/Redux-Saga chat UI with WebSockets and resumable sessions.
- Target Selfserve: built and scaled a self-serve ad-creation and delivery platform for DV360 and Meta — React frontend on a Node.js/MongoDB backend for cross-channel campaign workflows.
- Created an FFmpeg-powered Ad Designer and a Media Personalizer generating creative templates from real-time audience segments and weather data; publishing integrations with DV360, Meta, TikTok, and Snapchat.

Konnect — Freelance, Seoul (remote)

Jun 2025 – Apr 2026

Full-Stack Engineer · AI-powered Korea living platform — app, web, and backend, end to end

- Built the Konnect mobile app solo in React Native / Expo (Android + iOS): Firebase multi-provider auth, streaming NDJSON search, EN/KR i18n, voice search, and a signed release pipeline.
- Engineered a 4-service FastAPI microservices backend (Query, Discovery, Enrichment, Publisher) over Kafka, PostgreSQL/pgvector, and Redis — a bilingual intent-aware RAG pipeline (34 intents, 31 categories) with multi-provider search (Naver, Google GenAI) and Pydantic v2 modeling.
- Shipped the web product: a React 18 SPA across 16+ responsive routes — Material UI, Tailwind CSS, Framer Motion, Redux Toolkit, Google OAuth — in a Dockerized, Pyright-type-checked monorepo.
- Ran the entire build with agentic AI workflows — Claude Code with issue-tracked autonomous sessions — across design, implementation, testing, and release.

General Electric (Aviation) — Bangalore

Jun 2016 – Sep 2020

Senior Software Engineer

- ViewIT (aviation data visualizer): owned the architecture and Plotly.js/d3.js visualizations; replaced licensed Spotfire with the in-house tool, saving \$3M in licenses.
- DTi Support (NLP search): configured SpaCy with aviation matchers and GloVe models over Flask APIs and a Vue/Vuex UI — cut engineer resolution time by 90% and saved \$200k/yr in manual triage.

Verizon — Chennai

Aug 2014 – Jun 2016

Software Engineer

- UIS (Universal Identity Services): high-assurance identity credentials for healthcare professionals — security web apps with hashed encryption, static vulnerability analysis, CI/CD enablement, and DB migrations.

SKILLS

AI & Agentic

Claude Code, Copilot, agentic workflows, RAG, pgvector, prompt design, Google GenAI

Frontend

React, Next.js, TypeScript, Redux, Tailwind CSS, Material UI, Vue

Mobile

React Native, Expo, Firebase, Android/iOS release pipelines

Backend

Python, FastAPI, Node.js, Kafka, PostgreSQL, Redis, MongoDB

Platform

Docker, CI/CD (Jenkins, SonarQube), Git, npm monorepos, Pyright

EDUCATION

SRM University, TN, India

B.Tech in CSE — 8.45 CGPA
2010 – 2014

Brightlands School, India

XII (ISC) — 92.25%
2008 – 2010

RECOGNITION

3 achievement awards for ViewIT and DTi Support; Best Engineering Product award for ViewIT (GE).
